

SCOTTISH LIFE DEPOSIT ADMINISTRATION FUND

The fund is closed to new investments.

HOW DOES THE FUND WORK?

The Deposit Administration fund is similar to a with profits fund but with a lower exposure to the stock market. As a result there is no terminal bonus although a regular bonus is added to the fund's value from time to time. The directors of Royal London decide on the level of bonus to declare each year. There are 3 different rates for the fund, Declared, Guaranteed and Interim. An explanation of each of these rates follows:

Declared – This is the rate of growth that is applied at the end of the policy year.

Guaranteed – This is the minimum rate that will apply in the following year's declaration.

Interim – This is the rate used where there is an exit from the fund. Therefore this rate will be applied between the last renewal date and the date of leaving the fund.

HOW IS THE FUND INVESTED?

The Deposit Administration fund is a subset of the closed Scottish Life With Profits Fund. The fund invests in a range of different asset types including fixed interest stocks, equities and property.

The aim of the investment strategy is to maximise the long term return on investments for deposit administration policyholders whilst recognising the need for the fund to meet its guaranteed liabilities.

The latest asset allocation is detailed in the following chart. It is our expectation that the high level of fixed interest investments will be maintained in the future.

WHAT ARE THE CURRENT RATES DECLARED?

The current rates declared as at the 1st January 2018 and applicable for the scheme year 2017/2018 are:

Declared Standard Growth Rate for 2017/2018 scheme year	5.75%
Interim Growth Rate	5.75%
Guaranteed Minimum Growth Rate for 2018/2019 scheme year	0.0%

These rates are declared after receiving actuarial advice. The rates declared will reflect the actual performance of the assets backing the business, after allowance for the expenses incurred and after a smoothing adjustment. The smoothing adjustment results in the rate of bonus that is declared each year being more stable than the rate of return on the underlying assets. For example, in good years the rate of bonus that is declared may be less than the return achieved. In bad years the rate of bonus may be more than the return achieved. Over the long term the intention is that these adjustments will cancel each other out.

Following exceptionally bad years from an investment point of view e.g. 2001-2003 the value of the underlying assets will have grown very little, or indeed may have fallen. However, as a result of smoothing, the bonus rates that were declared remained well above the rate of return achieved. This smoothing gives rise to a gap between the value of the underlying assets and the face value of the account. In these circumstances a Market Value Reduction may be applied on voluntary exit in order that policyholders who choose to leave, do so at a rate that properly reflects the underlying value of their policy. Please note that if a Market Value Reduction is applied to your policy, the value of your plan could be reduced and you could get back less than you paid in. The Market Value Reduction will not be applied if the policy is being cashed in on death or in certain other circumstances depending on the plan type.
