

Investment objective

Aim

This portfolio aims to deliver above inflation growth, whilst taking a medium to high level of investment risk relative to the other portfolios in the Governed Portfolio range. Investment risk is a measure of the expected volatility. On a scale rating the investment risk of Governed Portfolios from 1 to 7, with 1 being the lowest, this portfolio is a 5.

The portfolio invests in a range of asset classes, that can include, but is not limited to equities, fixed interest, cash, property, and commodities.

Ongoing Governance

This portfolio comes with ongoing governance. This simply means that our investment experts check it regularly. It allows us to maintain the best mix of assets in line with the risk category - and to make sure it is performing in line with its overall objectives - aiming to give your clients the best returns.

If our experts decide that the mix of assets needs to be adjusted, it happens automatically on their behalf, they don't need to do anything. What's more, this service comes at no extra cost.

Fund details

Fund manager	Trevor Greetham, Royal London Asset Management (since May-25)
Launch date	09.05.2025
Fund size	£12.78m
Fund Management Charge (FMC)	1.00%

Weightings may not total 100% due to rounding and cash holdings.

Portfolio performance against benchmark

No Performance data available until after one year

Source: Lipper, bid to bid, as at 28.02.2026, Royal London, as at 28.02.2026. All performance figures, including the figures shown for the growth in the benchmarks, have been calculated net of the Fund Management Charge. Past performance is not a guide to the future. Prices can fall as well as rise meaning you may not get back the value of your original investment. Investment returns may fluctuate and are not guaranteed.

Portfolio management

A Long Term View

- Aim is to identify the most efficient mix of assets for each risk target.
- Ensures portfolios remain appropriate for long term objectives to maximise returns after inflation for a given level of risk.
- Strategic Asset Allocation (SAA) is monitored on a quarterly basis by the Investment Advisory Committee (IAC) with a full review every 3 years.
- Based on capital market assumptions from Moody's Analytics overlaid with Royal London 'house' view.
- Review and test current SAA's against potential asset allocation combinations for a range of scenarios. This helps us identify which asset allocation offers the best potential performance for the level of risk taken in each portfolio, and the best risk return trade-off.

Supported By Short Term Opportunities

- Aim is to add value with tactical updates to the asset mix and underlying active strategies, whilst benefitting from the knowledge and experience of one of the UK's leading fund managers.
- Our experts constantly monitor the economy to exploit these market movements and steer the Governed Range towards stronger growth by tactically adjusting the asset allocation of each portfolio, within a risk-controlled framework.
- The Investment Clock is useful in identifying which assets to use throughout the economic cycle, but it doesn't identify market sentiment. That's why the Multi Asset team also use a range of quantitative models including momentum and sentiment factors to bring science to investment decision-making and influence tactical asset allocation.
- Scrutinising these models helps the Multi Asset team arrive at a view of where we are and how we need to be positioned.

Portfolio governance

Our Governed Portfolios have a formal review process and are monitored by the Investment Advisory Committee (IAC). The IAC consists of pension and investment experts and is headed up by an independent chairperson, to ensure that decisions remain impartial. The IAC meets regularly, usually on a quarterly basis, to review our full investment proposition. The IAC process is deliberately about taking a long-term view to ensure that investment decisions are based on sound fundamentals.

ALLOCATION
CHANGES

Last tactical change:

19 February 2026

Global equities remain near all-time highs. Despite concerns around AI and a pullback in selected US technology stocks, broader indices have continued to advance with Japan extending its rally following Takaichi's supermajority win in the Lower House, and EM and Asia Pacific shares continuing their strong year-to-date performance. We are adding to equities, acknowledging broad earnings improvement and a supportive macro environment. Elsewhere, we are adding to our overweight position in commodities which have continued their strong start to the year with geopolitical risk at the forefront. We are also reducing exposure to government bonds, taking profits at current levels.

The allocations shown are derived by using the latest tactical allocation as at 19.02.2026 and latest fund holdings data as at 28.02.2026. These figures should therefore not be relied upon as being exact. Negative allocations reflect the use of derivatives to decrease regional equity exposure. Allocations may not always total 100% due to rounding.
